The retailer checklist

A. Migration fixes (once, now)

1. Export your last pre-cutover POS inventory. Compare to NMS2S by Item ID.
2. For every item: product type correct? expiry real (not the +1-year default)? weight / volume per package entered? extraction type entered? in the right room?
3. Use *Correct Migrated Inventory* per item. Log what you changed.
4. Confirm migrated test results are attached; enter the missing ones from the COA.
5. Mature plants showing as Vegetative (producers): Production → Vegetative → Change Stage → Mature.
6. Confirm every user has their own NMS2S login (BioTrack users did not migrate).

B. Every day

1. Move received and tested stock to the Sales Floor; sync the POS.
2. Match POS tickets to NMS2S ticket IDs; chase unmatched within 24 hours.
3. Check the tax amount on each ticket equals what your POS computed (excise 14% + GRT by location; zero for medical).
4. Voids: whole-ticket only, 50+ character reason; make sure the POS side is void too.

C. Every receiving

Manifest Ready to Receive → count per Item ID → receive with actual counts and notes → deli-style conversion for dry flower if needed → move to Sales Floor → sync POS → check the invoice against accepted quantities; a difference is a credit memo.

D. Every delivery

Driver and vehicle registered in NMS2S first — licence number and plate must match exactly or the ticket is blocked. Licensed courier only; recipient pre-identified; ID checked and signature captured; \$10,000 vehicle cap (a 2025 rulemaking proposed \$5,000 and residential-only — status unresolved); records kept 12 months.

E. Every month

Inventory reconciliation at least monthly (16.8.2.40 NMAC): NMS2S quantities by room against physical count and POS on-hand, by Item ID and Barcode ID; theft, diversion or loss reported to CCD; excise return filed via TAP by the 25th, by location code; GRT with the medical deduction (D0-034) reported separately.
